

MTB Relay System Fitting Guide

For your event we are using D-tags, a very thin strip encoded with your entry number and event details.

Please follow these instructions to ensure optimum performance from your ChronoTrack timing tag

Each relay team will receive a race number with timing tag attached. Each member will receive a number holder.

The timing tag is already attached to the back of your race number, ready for you to insert in the number holder.

1. Attach holder to MTB with 2x ties on handlebars, 1x tie on cable

2. Insert your team's race number in holder of active rider

3. Ensure race number is fully inserted *and* horizontal as shown

4. When lap(s) is/are completed remove race number and pass to text team member

-  **Your time will only be recorded if your race number is in your holder when you cross the timing lines**
-  Please do not fold your race number or attempt to remove your timing tag from your race number. **If you fold or crease the tag you may break the circuit and no times will be recorded.**
-  **Please do not cut or alter the timing tag or race number. If you ignore this request no times will be recorded**

If you have difficulty following these instructions please see a timing official for assistance
